

Simulation (Enhance statistics)

- Production was started in the last week.
- Updated HBD code is used.
- Other conditions are the same as QM production for comparison of EXODUS only data.
- We have generated 5000 events and 50000 events will be finished in the next week.
- Problem: Disk space is limited and HPSS is down now. After recovering HPSS, we will move old files to HPSS and the speed of production is up.
