■ Features

1. High Density FPC Connector

The FH16 series is a fine pitch, zero insertion force (ZIF), right angle, bottom contact, connector compatible with flexible printed circuits (FPC) with a pitch of 0.3mm, 0.4mm, and 0.5mm and a recommended thickness of 0.295mm for single-sided or 0.306mm for double-sided. The FH16 provides a higher pin count given the same amount of board space than other manufacturers of similar product. With a large selection in pin density, the FH16 series greatly improves design flexibility.

- FH16 : 0.3mm pitch 60, 80, and 90 contacts
- FH16M : 0.4mm pitch 80 and 96 contacts
- FH16H : 0.5mm pitch 50 contacts
- FH16P : 0.5mm pitch 64 contacts

2. Easy mounting on PCB

FH16 supports 0.3mm pitch cable but only requires a 0.6mm pitch pad layout on the PCB. The FH16's staggered pin design allows the mounting lead area to be twice as wide as the FPC contact area making it easier to place the connector on the board given the fine pitch of the contacts.

3. User Friendly Flip-Lock Design

The flip-lock (one-touch rotating type) ZIF structure secures the FPC connection with a single and light force. This design helps simplify assembly and repair work. When locking the FPC, the audible click assures the assembly worker of a steady FPC connection resulting in improved customer service.

4. Prevents FPC from escape and oblique mating

The FH16 series with its recommended FPC dimensions prevents the FPC from escape and oblique mating thereby securing a steady connection.

5. Compatible with Automatic Assembly Tooling

Embossed tape packaging allows for automatic placement onto the PCB.

◆ Connector Operating Instructions, precautions and recommendations

Operation	Precautions
<p>1.FPC Termination procedure. Connector installed on the board.</p> <p>1) Remove and dispose the pick-and-place insert.</p>  <p>2) Rotate down the actuator until firmly closed. It is critical that the inserted FPC is not moved and remains fully inserted. Should the FPC be moved, open the actuator and repeat the process, starting with Step 1 above.</p>  	<p>1) Fully insert the FPC parallel to mounting surface, with the exposed conductive traces facing down.</p>  <p>2) The connector will assure reliable performance when the actuator is open to 120° maximum (see fig.1) Do not exceed this angle, as this may cause permanent damage to the connector.</p>  <p style="text-align: right;">Fig.1</p> <p>3) Do NOT push/pull actuator. Any damage to actuator will require replacement of the entire connector.</p> 
<p>2.FPC Removal</p> <p>1) Lift up the actuator. 2) Carefully remove the FPC.</p>

3. Precautions

1. This specification is a recommendation for the construction of the FH16 Series FPC ($t=0.3 \pm 0.05$).
2. The FH16 Series are connectors for thin FPC which is beginning to be used in cameras and other miniature equipment.
 Stiffener is not required for double-sided FPC which will be reflected in FPC cost reduction.
 Please note that in the case of single-sided FPC, stiffener is required, but the thickness dimension can be created easily.
 For details about the construction, please contact the FPC manufacturer.
