Probing the "Inner Workings" of QGP with HF

• Heavy quark energy loss mechanisms in QGP

- Radiative vs collisional
- Mass dependence R_{AA} @transition region, pT ~ M_Q

Heavy quark interactions with QGP

- HF diffusion coefficient, "flow"
- QGP properties, RHIC vs LHC

• CNM to QGP transition

- pp, pA and AA, RHIC vs LHC
- Event multiplicity dependence, onset of QGP?

Heavy quark hadronization

- Coalescence, non-perturbative QCD at low pT
- Baryon/Meson ratios
- Test pQCD at high pT

sPHENIX projections:

Rich set of observables - hadrons and jets

The sPHENIX Experiment

MVTX beam view R = 2.5 - 4.0 cm

Key capabilities:

- Full azimuth, |eta| < 1.1
- High trigger rate ~15kHz, collect all central AuAu
- EMCal: high pT direct photons
- Inner and outer HCals: jets
- Precision tracking: HF and more
 - 0.2 < pT < 40 GeV

Trigger-less streaming readout, p+p and pAu

sPHENIX Run Plan

Year	Species	$\sqrt{s_{NN}}$	Cryo	Physics	Rec. Lum.	Samp. Lum.
		[GeV]	Weeks	Weeks	z <10 cm	z <10 cm
2023	Au+Au	200	24 (28)	9 (13)	3.7 (5.7) nb ⁻¹	4.5 (6.9) nb ⁻¹
2024	$p^{\uparrow}p^{\uparrow}$	200	24 (28)	12 (16)	0.3 (0.4) pb ⁻¹ [5 kHz]	45 (62) pb ⁻¹

SPHE

Open HF Tagging with MVTX Upgrade - Monolithic-active-pixel-sensor based VerTeX detector

- MVTX key parameters: (ALPIDE)
 - pixel size: 27um x 29 um
 - ultra-thin stave: 0.35%X₀
 - Integration time: ~5us
- Multi-tracks w/ large DCA
- 2nd vertex mass
- Exclusive hadron reconstruction

b-jet efficiency

Work in Progress: from Full Monte Carlo Simulations

PYTHIA 8 p+p with full detector GEANT sim + reco

KFParticle package implemented for exclusive HF hadron reconstruction

Work in Progress: More from KFParticle Outputs

For D*, pT ~> 1.5GeV, with soft pion pT > 0.2GeV

Precision HF Hadron and b-Jet R_{AA}

SPHE

Many factors affect the HF hadron production:

- Heavy quark energy loss in QGP: mass, pT dependence
- Heavy quark diffusion in QGP
- Heavy quark hadronization in QGP

Also other observables:

- di-b-jet, modification of HF jet structures etc.

Precision "Flow" Measurements of B-hadron and b-Jets

$$B \rightarrow \overline{D^0} + X$$
 (B.R. 60%)

Many factors affect the HF hadron production:

- Heavy quark energy loss in QGP
- Heavy b-quark diffusion in QGP
- Heavy quark hadronization in QGP

b-jet flow, pQCD:Energy loss induced v2?

SPHE

From Quarks to Hadrons in QGP

- Critical to understand the hadronization process
- Hadron production strongly affected by the QCD environment
 - Non-perturbative process important at low pT, coalescence etc.
 - Strong multiplicity dependence observed in p+p, pA and AA ... @RHIC and LHC
 - Breakdown of pQCD factorization at low pT
- High precision measurements of HF meson and baryons in sPHENIX

Clear pT dependence observed: e+e- vs pp

From Quarks to Hadrons (Cont.)

- More exclusive HF hadrons D^{+/-}, Ds, Bs yields etc.
- Event multiplicity dependence

Ming Liu (LANL), sPHENIX HF Physics @APS April Meeting

10

SPHE

Summary and Outlook

- Great HF physics opportunity at RHIC
 - High precision measurements of HF over a wide pT range, to study "inner workings of QGP"
 - Heavy quark energy loss mechanisims
 - HF diffusion coefficients
 - Jet structure modification in QGP
 - Heavy quark hadronization and QCD
 - Complimentary to LHC
- sPHENIX day-1 physics in early 2023
 - Detectors ready by 2022
- Other physics not covered here
 - Jets and QGP
 - Upsilons and QGP
 - Spin and cold QCD
