

The only real issue is that the gains for some channels are not stabilizing.

Also, some of the t_0 values need adjusting

The offline analysis can account for slight errors in the energy calibration :

Yellow Detector 0 before offline recalibration

Yellow Detector 0 after offline recalibration

TODO

The next thing in the pipeline is to automatically run the offline analysis after each fill.

The wiki page at <https://wiki.bnl.gov/rhicspin/Polarimetry/H-jet/Run12> will be updated manually daily.

The automatic analysis results will be displayed on the same webserver on yellowpc as the pC data.
