Missing…

- EmCal only
  - Detailed user requirements
  - General purpose documentation
    - overview/introduction/principle…
  - Software Coordinator

Now in good shape with Edouard write-ups

To stimulate, avoid duplicated work, etc…

- EmCal/PHENIX
  - pdbcal features

Do we code them ourselves or ask pdbcal people ?

A note on (ideal?) software process

- Iterative procedure
  - Requirements
    - Tell developers *what* should be achieved, but not *how* it should be done
  - Design
    - focus on *interfaces* (external view of the system, must change as little as possible) first
  - Implementation
    - may evolve without changing the way the system is viewed/used from outside world
  - Refine and/or add requirements
